

OctaPack

Bulk goods are now stackable!

Announcing the next generation of bulk containers – OctaPack, the plastic octagonal bin with an integrated twin-sheet pallet and special lids! This innovative container permits problem-free stacking and can be used outdoors in any weather.

The Plastic Bulk Transport Container

OctaPack with its wide range of accessories sets new industry standards for bulk packaging. Combining the tried-and-tested advantages of TRIPLEX structured-core walls, an integrated twin-sheet pallet base and specially designed lids, OctaPack is a highly versatile problem solver. Special design features – such as the octagonal cross-section, sturdy injection-moulded pallet feet and receiving recesses in the HeavyDuty lid which mate to the feet of the container above – provide practically unlimited stackability even when loaded. As a result, storage floor space requirements are reduced by 50 % or more. OctaPack is ideal for outdoor use as it securely protects its contents from inclement weather. Even when used indoors and outdoors under the most demanding conditions, OctaPack performs reliably over a very long service lifetime. Due to its collapsible "M"-design and perfectly nesting base pallets and lids, OctaPack can be easily stowed and transported when empty with minimum space requirements.

Three types of lids are available for the OctaPack system. BasicProtect is the lightweight and easy-to-handle lid version made of high-impact polycarbonate. HeavyDuty is a heavier, sturdier lid made of high-impact HDPE which is required for secure stacking. SpecialOutdoor has sloped surfaces which provide reliable protection against the elements even under extreme conditions.

Advantages and Benefits

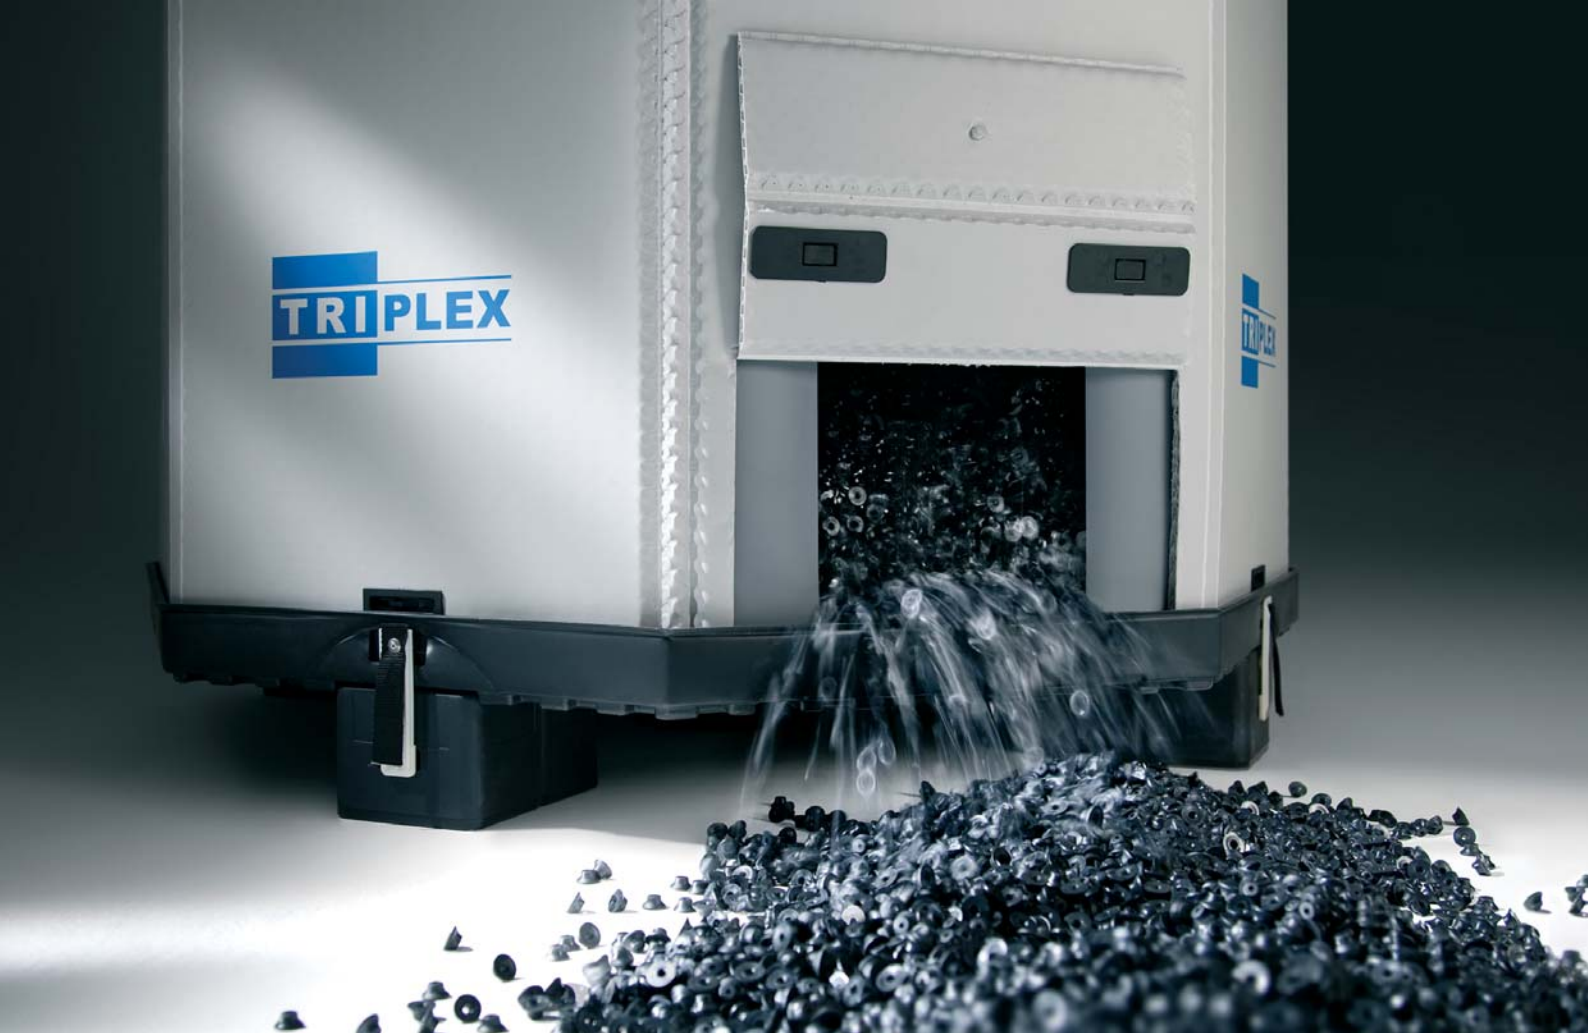

- significant cost savings due to reusability
- extremely durable
- long service life, many use cycles
- outstanding strength
- rugged, withstands rough treatment
- protects contents ideally from inclement weather
- multiple stackability
- substantially reduced storage floor space
- sloped base and outlet ensure complete emptying
- volume-saving storage when empty with nestable components
- no material accumulation in corners
- sturdy twin-sheet base pallet
- various lid designs available
- extremely sturdy pallet feet, can be replaced individually
- secure locking of enclosure wall in pallet base

Available Features

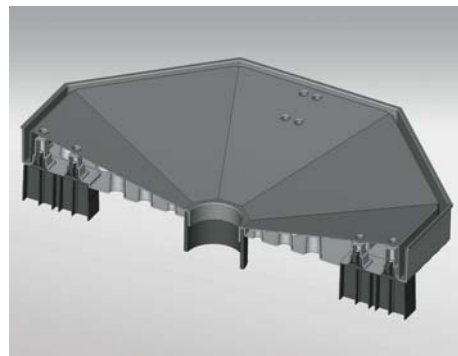

- pallet with integrated floor insert (PE REC, black)
- collapsible container body made of structured-core panels (PP grey)
- lid options:
 - HeavyDuty: HDPE REC black
 - SpecialOutdoor: HDPE REC black
 - BasicProtect: PC REC black
- EasyLift unloading flap with tried-and-tested QuickSlide® slide closure
- outer base perimeter 1.20 m x 1.20 m
- any desired system height (recommended heights: 1.15 m or 2.30 m)
- container body available in custom colours
- numerous other options including document pouches, custom printing, etc.

Base Pallet Versions

Octapack bulk containers are available with different base pallet versions to accommodate differing loads to be contained. Both versions provide the benefits of outstanding flexural stability due to weight concentration on the central foot. The sturdier version, designed for weights up to about 1000 kg, is used in particular for tall Octapack systems and those carrying heavy bulk goods such as regrind materials, crumbs, pellets and foods (e.g. flour) with bulk densities greater than 1000 g/l. The standard base version is designed to support weights up to 500 kg and is used to carry lighter products such as injection moulded parts, preforms and other lightweight components with bulk densities less than 1000 g/l.

For Stackable Bulk Products

The HeavyDuty Lid

OctaPack used with the HeavyDuty lid reliably supports stack loads of up to about 1000 kg in weight. It can be used in multiple-stack configurations, therefore reducing your storage space requirements by 50 % or more. When empty, the container can be collapsed and the lids nested in space-saving stacks.

For Safe Outdoor Storage

The SpecialOutdoor Lid

The SpecialOutdoor lid, designed to serve as an umbrella against rain, snow, hail etc., is a unique solution for optimum outdoor use. It can be used in combination with the HeavyDuty lid for weather-protected stacking.

For Reliable Protection

The BasicProtect Lid

The BasicProtect lid provides reliable protection against contamination and is optimally suited for indoor use, e.g. on line with operating machinery. Although OctaPack bins covered with BasicProtect lids cannot be stacked when filled, they can be stacked when empty to realize space savings. BasicProtect is the lightweight, sturdy and low-cost lid version.

For Convenient Unloading

The EasyLift Unloading Flap

This new and user-friendly unloading flap incorporates the utility-model protected QuickSlide® closure lock and an interior anti-spill guard secured on both sides of the flap. The snap-closing action locks the closure positively and securely in position, preventing inadvertent opening or displacement and holding the unloading flap reliably in its closed position. Hook-and-loop fastener strips hold the flap in position when open on the outer surface of the enclosure. Opening and closing of the flap are greatly facilitated by its intermediate hinge. The result: controlled bulk product unloading.

OctaPack & Co – Specialists for Storage and Transport of Bulk Goods

The technology and execution of the TRIPLEX OctaPack system including its broad variety of accessories for specific load capacity, storage and unloading requirements make it a unique storage and transport system for bulk goods. The multitude of options available, including various lids, bases and flaps as well as customizable panel properties such as thickness, UV resistance, conductivity and reinforced high-temperature strength, permit tailor-made design for any application.

OctaPack is available in any RAL colour or colour combination to provide the exact visual appearance required, e.g. by corporate design guidelines. Have a close look at the TRIPLEX OctaPack system and the outstanding value it provides – along with environment-friendly benefits such as the TRIPLEX NextLoop recycling service.

NextLoop Service – Cost-Efficient and Environment-Friendly

TRIPLEX pallet enclosures and OctaPack containers are known throughout the industry for their outstanding quality and exceptional workmanship. However, while serving well in demanding day-in day-out use, even these premium bulk containers can be damaged or in fact destroyed by misuse or improper handling.

Responding to this situation, TRIPLEX is the first manufacturer to offer their exclusive NextLoop service. Whether you decide to repair, recycle or replace the damaged containers, you will benefit from this service in several different ways. First, you will realize a further significant reduction in transport packing costs and keep your transport packing systems operative on a permanent basis. In addition, you will make an important contribution to protecting the environment

and conserving natural resources. You will also benefit from low repair costs and material cost savings – i.e. your environmental bonus. A further feature: NextLoop services are provided not only for TRIPLEX panels but also for almost all types of similar polypropylene enclosures and panels. Please consult your pallet system distributor for further details.

OctaPack & Co – The Problem Solver

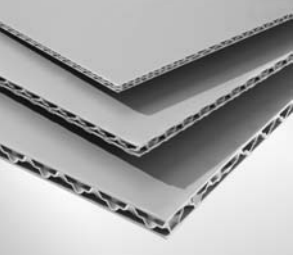

The OctaPack system with HeavyDuty and SpecialOutdoor lids is an unbeatable combination for outdoor use. Utilizing the proven reliability of TRIPLEX structured-core panels and their outstanding weathering resistance, it is used with a conventional inliner only and does not require outside stretch-wrapping. In addition the HeavyDuty lid provides stackability and therefore storage space savings of 50 % or more.

Gone are the days of cardboard octabins

OctaPack containers have "unlimited" stackability

Our Promise

At TRIPLEX, we focus on coming up with new, surprising ideas – today we're thinking about your requirements for tomorrow. In looking for new ways to solve your problems, we are not afraid to take unconventional paths, relying on imagination for uncommon solutions along with courage to travel uncommon routes. By keeping our eyes open and constantly learning more, we break through barriers and set new standards. True to our roots as a family-owned company, we listen exactly to what you have to say and attach utmost importance to fairness in our business relationships. At TRIPLEX, our employees, customers and suppliers are fully committed with their hearts and their minds and work together as partners.
